

Release 3.0.0

Client related updates:

- **Get New Vmess:**
 - Now the admin can activate and deactivate each server and only the active servers are shown in this section.
 - Only the name of the servers is showing based on the method of calculating their traffics. (Each group of servers are separated by some dashes)
 - **New menu for new users:**
 - Now new users can join an organization based on a predefined referral code and then purchase the desired plan.
 - **New payment methods:**
 - Now we can have different payment methods for an organization. These methods are e-transfer to the admin's card number, Zarinpal, crypto payment on weswap.digital and direct crypto transaction (only TRC20 for now) to our wallet. Inside these methods, only the e-transfer is not fully automated and needs the admin approval and others are automatically accepting the payment after success payment and will inform user on failed transactions.
 - Users now can send text, image, file including pdf and image formatted files for their payment's receipt.
-

Admin related updates:

- **Charge an account:**
 - There was a bug in charging a depleted account in XUI by the user in the bot which is now fixed.
- **Payment Options for admin:**
 - Admin can set a card number and it will be automatically showed in the e-transfer payment method message in the bot.
 - Admin can active or deactivate a payment method and if there is only one payment method, it will be directly be showed to the user.
 - Managers now can receive payments in an extra topic-enabled group and receive tickets and payments in different topics.
 - Managers can accept or reject payments in the ticketing group. If manager accepts a payment, the user, if it is new user, will automatically added to the organization (based on the referral code), will be charged based on its selected plan, the payment receipt and other data will be stored in the database and the bot will inform the user on its progress.

- **Managing organizations:**
 - o Admins can change channels, ticketing group and all organization related information dynamically including the payment related info are now specified on each organization separately.
-

General updates:

- Diagram of the client and admin flow on the bot, XUI and management channels in telegram are provided and the client flow will be sent in the development channel.
 - Now the state of the old messages is stored for the bot and with restarting the bot, the old messages are reusable (consider that in the old releases, users would not inform bot running status and may experience bugs during their use)
 - Upgrades on the version of the XUI. The connection speeds and panel API's performance are improved.
 - Notifying users on 85% usage of their traffic and also exceeding their traffic limit by the bot.
-

Next updates:

- **DNS or routing for restricted services like Spotify**
- **Adding an external service like [Shecan.ir](https://shecan.ir)**
- **Routing for Iran websites**
- **Problems with status page**
- **Specific Referral Code for each user and reward on referring**
- **Payment History for users in the menu**
- **Tutorial option in the menu**
- **Fail2Ban for referral code inserting or approval by the user referee user in the bot**
- **Option for time limitation on connections**
- **support for new protocols like Shadowsocks**
- **adding Persian lang to the bot**
